- View manual online...
- Read a detailed account of Delphi's accuracy...
- Download Delphi packaged for Windows ...
- Download Delphi packaged for Macintosh...
- Previous versions are still available...

\*requires Palm OS 3.5 or later.

### astrolib 1.03

The astrolib library calculates planetary positions and time zones.

Positions of sun, moon and planets up to Pluto are calculated with an accuracy of the order of one arc minute for dates less than a century away from now. Time zones and other information for about 350 locations on earth are retrieved from UNIX time zone data. About 2000 additional locations are linked to UNIX time zone locations.

The source code is distributed under the GNU Lesser General Public License.
